

Project Hail Mary

Comedic One-Sheet

General Use One / Two-Liners

- Ryan Gosling's character wakes up at a new job with no memory of how he got there, which is why the film's working title was *Severance in Space*.
- In this movie, a man risks everything to save a rock. In Kevin Hart movies, a man risks everything to save The Rock.
- Sending Ryan Gosling on this type of mission makes sense. He's one of the few guys on Earth hotter than the sun he's trying to save.
- The most unrealistic scene in this movie about interstellar space travel and rock monsters is the one where they're doing karaoke and everyone's a good singer.
- The movie grapples with deep scientific questions about interstellar travel, time dilation and microbiology. My best friend's review? "I like the rock guy."
- Rocky survives a lot in this movie. He beats scissors but ultimately succumbs to paper.
- It's not the first time Gosling has played a space cadet. In *La La Land* he plays a white guy who thinks he can save jazz.
- I thought Gosling made a pretty convincing astronaut. Others say his performance lacks gravity.
- The main character wakes up in an unfamiliar place and a whole different year. That's not a movie opening, that's my New Years Eve.
- *Project Hail Mary* shows first contact with an alien species, the most difficult first contact since I decided glasses are too much of a hassle.

Intros / Transitions

- Welcome back to our discussion of *Project Hail Mary*, the movie I took my wife to after she told me she needed some space.
- Today we're talking about *Project Hail Mary*, the most heartbreaking movie about a sun dying since *Ordinary People*.
- We're back, discussing *Project Hail Mary*, my favorite movie named after a football play since *The Post*.
- We were talking about *Project Hail Mary*, the only movie starring Rocky where nobody punches Apollo Creed.
- Welcome to today's episode about *Project Hail Mary*, a movie in which a man gets shot into space against his will, begging the question: How we can make that happen in real life?
